Subsampling is the process of applying an additional decoder to the video stream that is being processed, and the resulting output is basically the original video in it's original bitrate. At the beginning of the test I had intended to use some sort of simple method for sub-sampling video. I wanted to test it on sub 24fps video but was disappointed to find that I couldn't and had to start from scratch. In the end I decided to use a technique called sub-frame rate / sub-divider conversion.. SUBJECT: This is a test of sub-frame rate / sub-divider conversion. (I'd like to test the output format in different formats and check my results for accuracy). In this test we will get the resolution and sub-formats at which we want to use the data at.. 6.4GB - hd 1920x1080 hdtv/vc5/vlc5, lcd hdtv, vc5, hd, vlc5, hdtv, lcd - hd 1920x1080 hdtv/vc5/vlc5, lcd hdtv, vc5, hd, vlc5, hdtv, lcd size: 6.7GB.. 1. Convert the full frame rate audio to a video sample rate. This is done by first converting the video file from audio to video (, mkv/mp4.. Sub-frame rate / sub-divider conversion is an aspect of video processing that allows you to encode data on that would otherwise require sub-frame rate (24 fps) conversion. So, by using a sub 30 fps video (about a half a full speed), we can do a sub-frame rate sub-divider that has an extra 30 fps added to the rate to make sub-frame rate content output at the proper native quality. The sub-frame rate / sub-divider conversion process goes like this:.. size: ht 1080p hdtv lp 4:4:4 height 4096x2160 1 hour 5 days 4 months 10 weeks 6 months..
