

This post will intro you to the features of the snopy mega racing wheel-v18 driver. It has a metal base with screw threads to ensure it is securely attached to your seat, and is resistant to shaking when driving over bumps. The manual option for adjusting the base tension adds even more stability. The game pad has digital turbo and brake pedals, so this product is perfect for serious gamers who want high-quality racing simulations in their games. The steering wheel is very sensitive, but there are options for adjustments if you need it less sensitive or looking for something more realistic. The snopy mega racing wheel- v18 driver has a very simple and ergonomic design, allowing the user to control their games easily. You can adjust the speed of your car's movements with the adjustable resistance of the steering wheel. The tilt tension for this product can be adjusted from 20- degree to 110-degree, allowing you to level the steering wheel whenever it is needed. In addition, there are four buttons at the top of the device, which will allow you to conveniently access your vehicle maintenance options and other functions without taking your hands off of it. This makes it much more convenient than using your hands and completely losing control over your vehicle if you were to take them off. This device is compatible with both Windows and Mac OS. You can choose to download the drivers for your computer or the instructions explain how to install the software packages on your device, as well as how to run them properly. The manufacturers of this product state that they really care about their customers, by ensuring that if there are problems with this product, it will be sent back to them for a free replacement. Based on other users' experiences with this company, the customer service team is very customer-service oriented and can provide solutions whenever you have questions or concerns regarding this product.
